

Integrated Car Yards

17/04/2020

The project aims to increase the efficiency and quality of services provided to the population by proposing the delegation of removal, guarding, deposit, inspection, release and auction preparation services for vehicles removed or seized within the State of Paraná, as well as the relocation of vehicles and environmental recovery of the areas of the vehicle yards that belong to the State of Paraná.

The Integrated Vehicle Yard model proposes the centralization and standardization of the provision of services of all yards in the State of Paraná, that is, the yards under the responsibility of DETRAN, Military Police, Civil Police, Military Road Police and DER.

Status: studies are currently being carried out regarding only the yards under the responsibility of DETRAN.
